Behavioral Science & Policy, Volume 3-Craig R. Fox 2017-12-26 The success of nearly all public- and private-sector policies hinges on the behavior of individuals, groups, and organizations. Today, such behaviors are better understood than ever, thanks to a growing body of practical behavioral science research. However, policymakers often are unaware of behavioral science findings that may help them craft and execute more effective and efficient policies. The pages of this new journal will become a meeting ground: a place where scientists and non-scientists can encounter clearly described behavioral research that can be put into action. By design, the scope of Behavioral Science & Policy is broad, with topics spanning health care, financial decisionmaking, energy and the environment, education and culture, justice and ethics, and work place practices. Contributions will be made by researchers with expertise in psychology, sociology, law, behavioral economics, organization science, decision science, and marketing. The journal is a key offering of the Behavioral Science & Policy Association in partnership with the Brookings Institution. The mission of BSPA is to foster dialog between social scientists, policymakers, and other practitioners in order to promote the application of rigorous empirical behavioral science in ways that serve the public interest. BSPA does not advance a particular agenda or political perspective.

Understanding the Working College Student-Laura W. Perna 2012-03-12 How appropriate for today and for the future are the policies and practices of higher education that largely assume a norm of traditional-age students with minimal on-campus, or no, work commitments? Despite the fact that work is a fundamental part of life for nearly half of all undergraduate students - with a substantial number of "traditional" dependent undergraduates in employment, and working independent undergraduates averaging 34.5 hours per week - little attention has been given to how working influences the integration and engagement experiences of students who work, especially those who work full-time, or how the benefits and costs of working differ between traditional age-students and adult students. The high, and increasing, prevalence and intensity of working among both dependent and independent students raises a number of important questions for public policymakers, college administrators, faculty, academic advisors, student services and financial aid staff, and institutional and educational researchers, including: Why do so many college students work so many hours? What are the characteristics of undergraduates who work? What are the implications of working for students' educational experiences and outcomes? And, how can public and institutional policymakers promote the educational success of undergraduate students who work? This book offers the most complete and comprehensive conceptualization of the "working college student" available. It provides a multi-faceted picture of the characteristics, experiences, and challenges of working college students and a more complete understanding of the heterogeneity underlying the label "undergraduates who work" and the implications of working for undergraduate students' educational experiences and outcomes. The volume stresses the importance of recognizing the value and contribution of adult learners to higher education, and takes issue with the appropriateness of the term "non-traditional" itself, both because of the prevalence of this group, and because it allows higher education institutions to avoid considering changes that will meet the needs of this population, including changes in course offerings, course scheduling, financial aid, and pedagogy.

Decision Making for Student Success-Benjamin L. This volume argues that the efficacy of these strategies can be improved by taking account of contemporary research on how students make choices. In Decision Making for Student Success, scholars from the fields of behavioral economics, education, and public policy explore contemporary research on decision-making and highlight behavioral insights that can improve postsecondary access and success. This exciting volume will provide scholars, researchers, and higher education administrators with valuable perspectives and low-cost strategies that they can employ to improve outcomes for underserved populations.

American Best Colleges-Mortimer Zuckerman 1997-09-01

U.S. News & World Report- 1997

College Choices-Caroline M. Hoxby 2007-11-01 Aspiring college students and their families have many options. A student can attend an in-state or an out-of-state school, a public or private college, a two-year community college program or a four-year university program. Students can attend full-time and have a bachelor of arts degree by the age of twenty-three or mix college and work, progressing toward a degree more slowly. To make matters more complicated, the array of financial aid available is more complex than ever. Students and their families must weigh federal grants, state merit scholarships, college tax credits, and college savings accounts, just to name a few. In College Choices, Caroline Hoxby and a distinguished group of economists show how students and their families really make college decisions—how they respond to financial aid options, how peer relationships figure in the decision-making process, and even whether they need mentoring to get through the admissions process. Students of all sorts are considered—from poor students, who may struggle with applications and whether to continue on to college, to high aptitude students who are offered "free rides" at elite schools. College Choices utilizes the best methods and latest data to analyze the college decision-making process, while explaining how changes in aid and admissions practices inform those decisions as well. The Rise of Women-Thomas A. DiPrete 2013-01-01 While powerful gender inequalities remain in American society, women have made substantial gains and now largely surpass men in one crucial arena: education. Women now outperform men academically at all levels of school, and are more likely to obtain college degrees and enroll in graduate school. What accounts for this enormous reversal in the gender education gap? In The Rise of Women: The Growing Gender Gap in Education and What It Means for American Schools, Thomas DiPrete and Claudia Buchmann provide a detailed and accessible account of women's educational advantage and suggest new strategies to improve schooling outcomes for both boys and girls. The Rise of Women opens with a masterful overview of the broader societal changes that accompanied the change in gender trends in higher education. The rise of egalitarian gender norms and a growing demand for college-educated workers allowed more women to enroll in colleges and universities nationwide. As this shift occurred, women quickly reversed the historical male advantage in education. By 2010, young women in their mid-twenties surpassed their male counterparts in earning college degrees by more than eight percentage points. The authors, however, reveal an important exception: While women have achieved parity in fields such as medicine and the law, they lag far behind men in engineering and physical science degrees. To explain these trends, The Rise of Women charts the performance of boys and girls over the course of their schooling. At each stage in the education process, they consider the gender-specific impact of factors such as families, schools, peers, race and class. Important differences emerge as early as kindergarten, where girls show higher levels of essential learning skills such as persistence and self-control. Girls also derive more intrinsic gratification from performing well on a day-to-day basis, a crucial advantage in the learning process. By contrast, boys must often navigate a conflict between their emerging masculine identity and a strong attachment to school. Families and peers play a crucial role at this juncture. The authors show the gender gap in educational attainment between children in the same families tends to be lower when the father is present and more highly educated. A strong academic climate, both among friends and at home, also tends to erode stereotypes that disconnect academic prowess and a healthy, masculine identity. Similarly, high schools with strong science curricula reduce the power of gender stereotypes concerning science and technology and encourage girls to major in scientific fields. As the value of a highly skilled workforce continues to grow, The Rise of Women argues that understanding the source and extent of the gender gap in higher education is essential to improving our schools and the economy. With its rigorous data and clear recommendations, this volume illuminates new ground for future education policies and research.

Is the system designed just to protect the privileged and leave everyone else behind? Or can a college education today provide real opportunity to young Americans seeking to improve their station in life? The Years That Matter Most tells the stories of students trying to find their way, with hope, joy, and frustration, through the application process and into college. With insight, humor, and passion, Paul Tough takes readers on a journey from Ivy League seminar rooms to community college welding shops, from giant public flagship universities to tiny experimental storefront colleges. Whether you are facing your own decision about college or simply care about the American promise of social mobility, The Years That Matter Most will change the way you think—not just about higher education, but about the nation itself.

U.S. Tax Guide for Aliens- 1996

John U. Monro-Toni-Lee Capossela 2012-12-17 In 1967, John U. Monro, dean of the college at Harvard, left his twenty-year administrative career at that prestigious university for a teaching position at Miles College -- an unaccredited historically black college on the outskirts of Birmingham, Alabama. This unconventional move was a natural continuation of Monro's life-long commitment to equal opportunity in education. A champion of the underprivileged, Monro embodied both the virtues of the Greatest Generation and the idealism of the civil rights era. His teaching career spanned more than four decades, and, as biographer Toni-Lee Capossela demonstrates, his influence reached well beyond his lifetime. In addition to being a talented administrator, Monro was a World War II veteran, a crusading journalist, a civil rights proponent, and a spokesman for the fledgling Peace Corps. His dedication to social justice outlasted the fervor of the 1960s and fueled bold initiatives in higher education. While at Harvard he developed a financial aid formula that became the national template for needs-based scholarships and earned him the title "The Father of Modern Financial Aid." During his decade at Miles College he spearheaded a satellite freshman program in the economically depressed Greene County, then went on to help design a literacy program, a senior research requirement, and a writing-across-the-curriculum program at Tougaloo College. When hearing and memory loss drove him from the classroom, he moved his base of operations to Tougaloo's Writing Center, working with students in a collaborative relationship that suited his personality and teaching style. Only in 1996, after struggling with the symptoms of Alzheimer's for several years, did he retire with great reluctance. John U. Monro: Uncommon Educator is a tribute to this passionate teacher and an affirmation of how one person can inspire many to initiate positive and lasting change.

Handbook of Experimental Economics Results-Charles R. Plott 2008-08-21 Experimental methods in economics respond to circumstances that are not completely dictated by accepted theory or outstanding problems. While the field of economics makes sharp distinctions and produces precise theory, the work of experimental economics sometimes appear blurred and may produce results that vary from strong support to little or partial support of the relevant theory. At a recent conference, a question was asked about where experimental methods might be more useful than field methods. Although many cannot be answered by experimental methods, there are questions that can only be answered by experiments. Much of the progress of experimental methods involves the posing of old or new questions in a way that experimental methods can be applied. The title of the book reflects the spirit of adventure that experimentalists share and focuses on experiments in general rather than forcing an organization into traditional categories that do not fit. The emphasis reflects the fact that the results do not necessarily demonstrate a consistent theme, but instead reflect bits and pieces of progress as opportunities to pose questions become recognized. This book is a result of an invitation sent from the editors to a broad range of experimenters asking them to write brief notes describing specific experimental results. The challenge was to produce pictures and tables that were self-contained so the reader could understand quickly the essential nature of the experiments and the results.

Why Does College Cost So Much?-Robert B. Archibald 2014-08 For much of the past century college tuition has risen more rapidly than the inflation rate. Unlike many analyses of higher education, Archibald and Feldman show how broad economic factors have combined to push up cost. These forces are largely out of the control of colleges and universities.

Who Gets In and Why-Jeffrey Selingo 2020-09-15 A NEW YORK TIMES NOTABLE BOOK OF 2020 From award-winning higher education journalist and New York Times bestselling author Jeffrey Selingo comes a revealing look from inside the admissions office—one that identifies surprising strategies that will aid in the college search. Getting into a top-ranked college has never seemed more impossible, with acceptance rates at some elite universities dipping into the single digits. In Who Gets In and Why, journalist and higher education expert Jeffrey Selingo dispels entrenched notions of how to compete and win at the admissions game, and reveals that teenagers and parents have much to gain by broadening their notion of what qualifies as a "good college." Hint: it's not all about the sticker on the car window. Selingo, who was embedded in three different admissions offices—a selective private university, a leading liberal arts college, and a flagship public campus—closely observed gatekeepers as they made their often agonizing and sometimes life-changing decisions. He also followed select students and their parents, and he traveled around the country meeting with high school counselors, marketers, behind-the-scenes consultants, and college rankers. While many have long believed that admissions is merit-based, rewarding the best students, Who Gets In and Why presents a more complicated truth, showing that "who gets in" is frequently more about the college's agenda than the applicant. In a world where thousands of equally qualified students vie for a fixed number of spots at elite institutions, admissions officers often make split-second decisions based on a variety of factors—like diversity, money, and, ultimately, whether a student will enroll if accepted. One of the most insightful books ever about "getting in" and what higher education has become, Who Gets In and Why not only provides an usually intimate look at how admissions decisions get made, but guides prospective students on how to honestly assess their strengths and match with the schools that will best serve their interests.

The College Board College Handbook- 2007

Paying the Price-Sara Goldrick-Rab 2016-09-01 A "bracing and well-argued" study of America's college debt crisis—"necessary reading for anyone concerned about the fate of American higher education" (Kirkus). College is far too expensive for many people today, and the confusing mix of federal, state, institutional, and private financial aid leaves countless students without the resources they need to pay for it. In Paying the Price, education scholar Sara Goldrick-Rab reveals the devastating effect of these shortfalls. Goldrick-Rab examines a study of 3,000 students who used the support of federal aid and Pell Grants to enroll in public colleges and universities in Wisconsin in 2008. Half the students in the study left college without a degree, while less than 20 percent finished within five years. The cause of their problems, time and again, was lack of money. Unable to afford tuition, books, and living expenses, they worked too many hours at outside jobs, dropped classes, took time off to save money, and even went without adequate food or housing. In many heartbreaking cases, they simply left school—not with a degree, but with crippling debt. Goldrick-Rab combines that data with devastating stories of six individual students, whose struggles make clear the human and financial costs of our convoluted financial aid policies. In the final section of the book, Goldrick-Rab offers a range of possible solutions, from technical improvements to the financial aid application process, to a bold, public sector-focused "first degree free" program. "Honestly one of the most exciting books I've read, because [Goldrick-Rab has] solutions. It's a manual that I'd recommend to anyone out there, if you're a parent, if you're a teacher, if you're a student."—Trevor Noah, The Daily Show
