House of Psychotic Women-Kier-La Janisse 2015-01-09 Cinema is full of neurotic personalities, but few things are more transfixing than a woman losing her mind onscreen. Horror as a genre provides the most welcoming platform for these histrionics: crippling paranoia, desperate loneliness, masochistic death-wishes, dangerous obsessiveness, apocalyptic hysteria. Unlike her male counterpart - 'the eccentric' - the female neurotic lives a shamed existence, making these films those rare places where her destructive emotions get to play. HOUSE OF PSYCHOTIC WOMEN is an examination of these characters through a daringly personal autobiographical lens. Anecdotes and memories interweave with film history, criticism, trivia and confrontational imagery to create a reflective personal history and a celebration of female madness, both onscreen and off. This critically-acclaimed publication is packed with rare images that combine with family photos and artifacts to form a titillating sensory overload, with a filmography that traverses the acclaimed and the obscure in equal measure. Films covered include The Entity, Paranormal Activity, Singapore Sling, 3 Women, Toys Are Not for Children, Repulsion, Let's Scare Jessica to Death, The Haunting of Julia, Secret Ceremony, Cutting Moments, Out of the Blue, Mademoiselle, The Piano Teacher, Possession, Antichrist and hundreds more. Prior to this ebook edition, Kier-La's highly acclaimed book has already been issued twice in hardcover and twice in paperback, garnering extensive press coverage. Endorsement including the following: "God, this woman can write, with a voice and intellect that's so new. The truth in the most deadly unique way I've ever read." - Ralph Bakshi, director of 'Fritz the Cat', 'Heavy Traffic', 'Lord of the Rings', etc. "Fascinating, engaging and lucidly written: an extraordinary blend of deeply researched academic analysis and revealing memoir." - Iain Banks, author of 'The Wasp Factory' Framework for assessing ecosystem services from bamboo forests-Paudyal, K. 2019-11-06 Bamboo is well known for supporting people's livelihoods, and is widely used in landscape restoration programs while providing a wide range of ecosystem goods and services. However, while marketable goods from bamboo such as shoots for food and timber for construction, flooring and furniture are well known, the ecosystem services (ES) supply from bamboo is not, due to limited research. To date, very few studies highlight the role of bamboo forests in providing multiple ES that have local and global value. Lack of an appropriate framework and tools is considered a barrier to assessing the ES from bamboo forests. Therefore, this study attempts to develop an easy-to-apply framework to assess ES from bamboo and test them in three countries in Asia and Africa - Nepal, Indonesia and Ethiopia - in order to understand the relative supply capacity of the key ES from bamboo forests. The literature related to ES and assessment frameworks was reviewed so as to design an appropriate assessment framework for bamboo forests. This study offers an easy-to-apply framework that can be used widely. The research shows that the ES supply capacity of bamboo forests is higher than for industrial planted forest while it is lower than for the natural forests in all case study sites. The ES assessment from bamboo forests poses several challenges: defining and classifying ES, limited data, and complex relationships in trade-offs and synergies of ES that should be kept in mind while designing the framework.  
A Short History of Nearly Everything-Bill Bryson 2012-05-15 One of the world's most beloved and bestselling writers takes his ultimate journey -- into the most intriguing and intractable questions that science seeks to answer. In A Walk in the Woods, Bill Bryson trekked the Appalachian Trail -- well, most of it. In In A Sunburned Country, he confronted some of the most lethal wildlife Australia has to offer. Now, in his biggest book, he confronts his greatest challenge: to understand -- and, if possible, answer -- the oldest, biggest questions we have posed about the universe and ourselves. Taking as territory everything from the Big Bang to the rise of civilization, Bryson seeks to understand how we got from there being nothing at all to there being us. To that end, he has attached himself to a host of the world's most advanced (and often obsessed) archaeologists, anthropologists, and mathematicians, travelling to their offices, laboratories, and field camps. He has read (or tried to read) their books, pestered them with questions, apprenticed himself to their powerful minds. A Short History of Nearly Everything is the record of this quest, and it is a sometimes profound, sometimes funny, and always supremely clear and entertaining adventure in the realms of human knowledge, as only Bill Bryson can render it. Science has never been more involving or entertaining. From the Hardcover edition.  
The Rise in Vacant Housing in Post-growth Japan-Tomoko Kubo 2019-06-27 This book explores how Japanese cities have transformed since the 1950s by describing housing and urban planning policies, urbanization processes, and maps with GIS analysis. It also discusses how housing vacancies have increased in shrinking Japanese cities, with case studies in Tokyo, Kyoto, Hiroshima, and Utsunomiya, and examines public-private partnerships and civil engagement to revitalize cities. Providing examples of how Japanese cities have addressed the issues of aging populations and urban shrinkage, it contributes to better decision-making by politicians, planners, local authorities, NPOs, and local communities in many rapidly urbanizing and potentially aging regions such as Asia. In the era of urban shrinkage, Japanese cities have struggled with aging populations, low fertility, population loss, and a decline in the economic base over decades. In particular, shrinkage in metropolitan suburbs and large cities (e.g., sites of prefectural government with 300 000-400 000 inhabitants) has caused serious social problems owing to the huge aging population and large areas covered. One typical problem that has emerged is an increase in vacancies in now empty and abandoned housing.

Mapping Trophy Bucks-Brad Herndon 2003-09-17 Using Topographic Maps to Find Deer Topographic maps and aerial photos can lead you right to the biggest bucks you've ever seen. You just have to know how to use them. Brad Herndon takes the mystery out of finding deer with maps. Through years of dedicated hunting and careful study of maps and photos, Herndon has perfected the use of maps to find the routes deer travel. And once you know where the deer will be headed you can establish the perfect ambush site. Maps are often the forgotten link in scouting prime deer habitat. Yet because they show you all the hills, gullies, rivers and ridges, you can learn the lay of the land without walking mile after unproductive mile. Maps won't eliminate the need to get in the woods, but they will tell the best places to start your search for the buck of your dreams. Herndon also shows hunters how to use the latest Internet and computer technology to personalize any map. Mark your stand locations, the locations of deer sign, even note the best possible wind direction to make your hunt a success. If you hunt deer, let Mapping Trophy Bucks lead you right to where the big boys hide. The rest is up to you.

The Red Atlas-John Davies 2017-10-17 Nearly thirty years after the end of the Cold War, its legacy and the accompanying Russian-American tension continues to loom large. Russia's access to detailed information on the United States and its allies may not seem so shocking in this day of data clouds and leaks, but long before we had satellite imagery of any neighborhood at a finger's reach, the amount the Soviet government knew about your family's city, street, and even your home would astonish you. Revealing how this was possible, The Red Atlas is the never-before-told story of the most comprehensive mapping endeavor in history and the surprising maps that resulted. From 1950 to 1990, the Soviet Army conducted a global topographic mapping program, creating large-scale maps for much of the world that included a diversity of detail that would have supported a full range of military planning. For big cities like New York, DC, and London to towns like Pontiac, MI and Galveston, TX, the Soviets gathered enough information to create street-level maps. What they chose to include on these maps can seem obvious like locations of factories and ports, or more surprising, such as building heights, road widths, and bridge capacities. Some of the detail suggests early satellite technology, while other specifics, like detailed depictions of depths and channels around rivers and harbors, could only have been gained by actual Soviet feet on the ground. The Red Atlas includes over 350 extracts from these incredible Cold War maps, exploring their provenance and cartographic techniques as well as what they can tell us about their makers and the Soviet initiatives that were going on all around us. A fantastic historical document of an era that sometimes seems less distant, The Red Atlas offers an uncanny view of the world through the eyes of Soviet strategists and spies.

Timefulness-Marcia Bjornerud 2020-02-11 Why an awareness of Earth's temporal rhythms is critical to our planetary survival Few of us have any conception of the enormous timescales of our planet's long history, and this narrow perspective underlies many of the environmental problems we are creating. The lifespan of Earth can seem unfathomable compared to the brevity of human existence, but this view of time denies our deep roots in Earth's history—and the magnitude of our effects on the planet. Timefulness reveals how knowing the rhythms of Earth's deep past and conceiving of time as a geologist does can give us the perspective we need for a more sustainable future. Featuring illustrations by Haley Hagerman, this compelling book offers a new way of thinking about our place in time, showing how our everyday lives are shaped by processes that vastly predate us, and how our actions today will in turn have consequences that will outlast us by generations.  
Homing-Ji-Yeon O. Jo 2017-11-30 Millions of ethnic Koreans have been driven from the Korean Peninsula over the course of the region's modern history. Emigration was often the personal choice of migrants hoping to escape economic and political hardship, but it was also enforced or encouraged by governmental relocation and migration projects in both colonial and postcolonial times. The turning point in South Korea's overall migration trajectory occurred in the late 1980s and early 1990s, when the nation's increased economic prosperity and global visibility, along with shifting geopolitical relationships between the First World and Second World, precipitated a migration flow to South Korea. Since the early 1990s, South Korea's foreign-resident population has soared more than 3,000 percent. Homing investigates the experiences of legacy migrants—later-generation diaspora Koreans who “return” to South Korea—from China, the Commonwealth of Independent States, and the United States. Unlike their parents or grandparents, they have no firsthand experience of their ancestral homeland. They inherited an imagined homeland through memories, stories, pictures, and traditions passed down by family and community, or through images disseminated by the media. When diaspora Koreans migrate to South Korea, they confront far more than a new living situation: they must navigate their own shifting emotions as their expectations for their new homeland—and its expectations of them—confront reality. Everyday experiences and social encounters—whether welcoming or humiliating—all contribute to their sense of belonging in the South. Homing addresses some of the most vexing and pressing issues of contemporary transnational migration—citizenship, cultural belonging, language, and family relationships—and highlights their affective dimensions. Using accounts gleaned through interviews, author Ji-Yeon Jo situates migrant experiences within the historical context of each diaspora. Her book is the first to analyze comparatively the migration experiences of ethnic Koreans from three diverse diaspora, whose presence in South Korea and ongoing relationships with diaspora homelands have challenged and destabilized existing understandings of Korean peoplehood.
