Inventory of Water Resources Research in Australia- 1979  
Essay on Classification-Louis Agassiz 2013-03-21 A major influence on the development of American  
scientific culture, Swiss-born Louis Agassiz (1807-73) was one of the great scientists of his day. A student  
of anatomist Georges Cuvier, Agassiz adapted his teacher's pioneering techniques of comparative anatomy  
to paleontology, and he rose to prominence as a distinguished systematist, paleontologist, and educator.  
Agassiz introduced science to ordinary citizens to an unprecedented degree; people around the world read  
his books, sent him specimens, and consulted his opinion. Agassiz was also a staunch opponent of the  
theory of evolution, and he was among the last of the reputable scientists who continued to reject the  
concept after the publication of *The Origin of the Species*. All of nature bore testimony to a divine plan,  
Agassiz believed, and he could not reconcile himself to a theory that did not invoke God's design.  
Ironically, his 1851 *Essay on Classification* provided Darwin and other evolutionists with evidence from  
the fossil record to support the theory of natural selection. A treasure of historically valuable insights that  
contributed to the development of evolutionary biology, this volume introduced the landmark contention  
that paleontology, embryology, ecology, and biogeography are inextricably linked in classifications that  
reveal the true relationships between organisms. Its emphasis on advanced and original work gave major

impetus to the study of science directly from nature, and it remains a classic of American scientific literature.

National Society's Monthly Paper- 1857

The Magazine of Business- 1913

Paper Converting Machine Co., Inc. V. FMC Corporation- 1968
