Neuroimmunology of the Skin-Richard D. Granstein 2009-02-08 Much anecdotal information has suggested an influence of psychology and the nervous system on immunity within the skin and the expression of inflammatory skin disorders. Recent years have seen an explosion of knowledge providing a scientific basis for important regulatory interactions between the nervous system, the endocrine system and the immune system within the skin. The results of recent investigations have important implications, not only for an understanding of cutaneous immunity, but also for the development of novel treatments for diseases involving abnormal inflammation or immune reactivity within the skin. This book provides a comprehensive and interdisciplinary review of the molecular biology, cell biology, biochemistry and clinical aspects of nervous system-immune system interactions within the skin. It includes contributions from leading world experts in these areas. The contents are relevant to both investigators and clinicians interested in the skin, its functions and its disorders.

Human Thermal Environments-Ken Parsons 2007-03-22 Our responses to our thermal environment have a considerable effect on our performance and behavior, not least in the realm of work. There has been considerable scientific investigation of these responses and formal methods have been developed for environmental evaluation and design. In recent years these have been developed to the extent that detailed national and international standards of practice have now become feasible. This new edition of Ken Parson's definitive text brings us back up to date. He covers hot, moderate and cold environments, and defines these in terms of six basic parameters: air temperature, radiate temperature, humidity, air velocity, clothing worn, and the person's activity. There is a focus on the principles and practice of human response, which incorporates psychology, physiology and environmental physics with applied ergonomics. Water requirements, computer modeling and computer-aided design are brought in, as are current standards. Special populations, such as the aged or disabled and specialist environments such as those found in vehicles are also considered. This book continues to be the standard text for the design of environments for humans to live and work safely, comfortably and effectively, and for the design of materials which help the same people cope with their environments.

The Land Rover Story-Giles Chapman 2013-03-26 A unique look at the development of the Land Rover, this is the story of the simple four-wheel drive vehicle born out of post-war austerity that became a global byword for toughness and rugged style Launched in 1948, the Land Rover owed its low-key existence to shoestring British ingenuity and—literally—odds and ends left over from World War II. Rover thought it could keep its factory ticking over as the company's post-war fortunes slowly revived. They also thought that farmers might appreciate it as a handy cross between a pick-up and a tractor. But it was soon obvious that the company had created, in the Land Rover, a world-beating product. Giles Chapman tells the story of how Land Rovers have tamed the planet's toughest terrain with their unstoppable off-road capability. It also charts how the Land Rover legend allowed the marque to gradually expand its range with the Range Rover, Discovery, Freelander, and the latest Range Rover Evoque. They're all cars as familiar in cities and suburbs as they are at home in the countryside. Land Rover has been controversial, its fortunes tied to Britain's economic ups and downs. Today it's on a roll, leading a renaissance in British design and manufacturing, yet the continued presence of the Defender helps keep the Land Rover Story absolutely genuine.

In particular situations, either might predominate, and their relationship is likely to shift over the course of a campaign. This report addresses three questions: (1) How should air attack and ground maneuver be integrated? (2) How should the terminal attack control function be executed? It recommends that the Army and the Air Force work together to develop new concepts and technologies to improve the partnering of air and ground.
