Rural Policy Implementation in Contemporary China-Anna Ahlers 2014-01-10 At the turn of the millennium, the disparities between rural and urban livelihoods, underdevelopment and administrative shortcomings in the Chinese countryside were increasingly seen as posing a manifest threat to social harmony and economic and political stability. At that time the term "three rural problems" (sannong wenti) was coined which defined the main issues of rural life that needed to be targeted by government action: agriculture (nongye), villages (nongcun) and farmers (nongmin). In turn, with the launch of the 11th Five-Year Plan in 2006, a pledge was made to shift the focus of developmental efforts to the long-neglected countryside, which is still home to half of the Chinese population. This book presents an analysis of adaptive local policy implementation in China in the context of the "Building of a New Socialist Countryside" (BNSC) policy framework. Based on intensive field work in four counties in Fujian, Jiangxi, Shaanxi and Zhejiang Provinces between 2008 and 2011, it offers detailed analyses of the form and impact of county governments' strategic agency at certain stages and within certain fields of the implementation process (for example, the design of local BNSC programs, the steering of project funding, implementation and evaluation, the establishment of model villages and the management of public participation). Further, this study illustrates that BNSC is far more than the 'empty slogan' described by many observers when it was launched in 2005/2006. Instead, it has already brought about considerable shifts in terms of the process and outcomes of rural policy implementation. Altogether, the results of this research challenge existing paradigms by showing how, against the background of contemporary approaches to rural development and recent reforms initiated by the central state, local bureaucracies' strategic agency can actually push forward effective - albeit not necessarily optimal - policy implementation to some extent, which serves the interests of central authorities, local implementors and rural residents. By tying into the larger debates on China's state capacity and authoritarian adaptability, this book enriches our understanding of the inner workings of the Chinese political system. As such, it will prove invaluable to students and scholars of Chinese politics, public policy and development studies more generally.

Character Strengths and Virtues-Christopher Peterson 2004-04-08 "Character" has become a front-and-center topic in contemporary discourse, but this term does not have a fixed meaning. Character may be simply defined by what someone does not do, but a more active and thorough definition is necessary, one that addresses certain vital questions. Is character a singular characteristic of an individual, or is it composed of different aspects? Does character--however we define it--exist in degrees, or is it simply something one happens to have? How can character be developed? Can it be learned? Relatedly, can it be taught, and who might be the most effective teacher? What roles are played by family, schools, the media, religion, and the larger culture? This groundbreaking handbook of character strengths and virtues is the first progress report from a prestigious group of researchers who have undertaken the systematic classification and

measurement of widely valued positive traits. They approach good character in terms of separate strengths-authenticity, persistence, kindness, gratitude, hope, humor, and so on-each of which exists in degrees. Character Strengths and Virtues classifies twenty-four specific strengths under six broad virtues that consistently emerge across history and culture: wisdom, courage, humanity, justice, temperance, and transcendence. Each strength is thoroughly examined in its own chapter, with special attention to its meaning, explanation, measurement, causes, correlates, consequences, and development across the life span, as well as to strategies for its deliberate cultivation. This book demands the attention of anyone interested in psychology and what it can teach about the good life.

A Textbook of Biotechnology-R C Dubey 1993 FOR UNIVERSITY & COLLEGE STUDENTS IN INDIA & ABROAD Due to expanding horizon of biotechnology, it was difficult to accommodate the current information of biotechnology in detail. Therefore, a separate book entitled Advanced Biotechnology has been written for the Postgraduate students of Indian University and Colleges. Therefore, the present form of A Textbook of Biotechnology is totally useful for undergraduate students. A separate section of Probiotics has been added in Chapter 18. Chapter 27 on Experiments on Biotechnology has been deleted from the book because most of the experiments have been written in 'Practical Microbiology' by R.C. Dubey and D.K. Maheshwari. Bibliography has been added to help the students for further consultation of resource materials.

Governance for Drought Resilience-Hans Bressers 2016-05-11 This book presents the findings of a team of scientists and practitioners who have been working on the project "Benefits of Governance in Drought Adaptation" (in short: the DROP project), which is included in the European Union's INTERREG IVB NWE programme. The DROP governance team developed a Governance Assessment Tool (GAT), which allows the governance setting of a given region for planning and realizing drought adaptation measures to be assessed. Based on this assessment, recommendations can be developed for regional water authorities concerning how to operate most effectively towards increased drought resilience in this context. The GAT has been applied to six regions in Northwest Europe: Twente and Salland in the Netherlands, Eifel-Ruhr in Germany, Brittany in France, Somerset in the United Kingdom, and Flanders in Belgium. These regions are subject to drought aspects related to nature, agriculture and freshwater. This book will aid regional water authorities and other relevant stakeholders interested in governance assessment, whether that context is about water, more specifically about drought or flooding events, or other environmental issues. Further, the GAT can and has also been applied more broadly to a range of governance contexts for water management and beyond.
