Plunkett's Renewable, Alternative & Hydrogen Energy Industry Almanac 2007-Jack W. Plunkett 2007-01 There are few industry sectors in the world today with more potential than renewable and hydrogen energy. Clean, green and renewable energy technologies are receiving immense emphasis from investors, environmentalists, governments and major corporations. Today's high prices for crude oil, coal and natural gas will increase the demand for renewables of all types. A wide variety of technologies are being researched, developed and implemented on a global basis, from Stirling engines to wind power, from advanced nuclear plants to geothermal and fuel cells. Our analysis also includes tar sands (oil sands), oil shale, fuel cells, clean coal, distributed power, energy storage, biofuels and much more. You'll find a complete overview, industry analysis and market research report in one superb, value-priced package. It contains thousands of contacts for business and industry leaders, industry associations, Internet sites and other resources. This book also includes statistical tables, an industry glossary and thorough indexes. The corporate profiles section of the book includes our proprietary, in-depth profiles of the 250 leading companies in all facets of the alternative, renewable and hydrogen energy business. Here you'll find complete profiles of the hot companies that are making news today, the largest, most successful corporations in the business. Purchasers of either the book or PDF version can receive a free copy of the company profiles database on CD-ROM, enabling key word search and export of key information, addresses, phone numbers and executive names with titles for every company profiled.

Environmentally-Benign Energy Solutions-Ibrahim Dincer 2019-11-14 This book provides high-quality research results and proposes future priorities for more sustainable development and energy security. It covers a broad range of topics on atmospheric changes, climate change impacts, climate change modeling and simulations, energy and environment policies, energy resources and conversion technologies, renewables, emission reduction and abatement, waste management, ecosystems and biodiversity, and sustainable development. Gathering selected papers from the 7th Global Conference on Global Warming (GCGW2018), held in Izmir, Turkey on June 24–28, 2018, it: Offers comprehensive coverage of the development of systems taking into account climate change, renewables, waste management, chemical aspects, energy and environmental issues, along with recent developments and cutting-edge information Highlights recent advances in the area of energy and environment, and the debate on and shaping of future directions and priorities for a better environment, sustainable development and energy security Provides a number of practical applications and case studies Is written in an easy-to-follow style, moving from the basics to advanced systems. Given its scope, the book offers a valuable resource for readers in academia and industry alike, and can be used at the graduate level or as a reference text for professors, researchers and engineers.

Designing Climate Solutions-Hal Harvey 2018-11-01 With the effects of climate change already upon us, the need to cut global greenhouse gas emissions is nothing less than urgent. It's a daunting challenge, but the technologies and strategies to meet it exist today. A small set of energy policies, designed and implemented well, can put us on the path to a low carbon future. Energy systems are large and complex, so energy policy must be focused and cost-effective. One-size-fits-all approaches simply won't get the job done. Policymakers need a clear, comprehensive resource that outlines the energy policies that will have the biggest impact on our climate future, and describes how to design these policies well. Designing Climate Solutions: A Policy Guide for Low-Carbon Energy is the first such guide, bringing together the latest research and analysis around low carbon energy solutions. Written by Hal Harvey, CEO of the policy firm Energy Innovation, with Robbie Orvis and Jeffrey Rissman of Energy Innovation, Designing Climate Solutions is an accessible resource on lowering carbon emissions for policymakers, activists, philanthropists, and others in the climate and energy community. In Part I, the authors deliver a roadmap for understanding which countries, sectors, and sources produce the greatest amount of greenhouse gas emissions, and give readers the tools to select and design efficient policies for each of these sectors. In Part II, they break down each type of policy, from renewable portfolio standards to carbon pricing, offering key design principles and case studies where each policy has been implemented successfully. We don't need to wait for new technologies or strategies to create a low carbon future—and we can't afford to. Designing Climate Solutions gives professionals the tools they need to select, design, and implement the policies that can put us on the path to a livable climate future.

Refocus Marine Renewable Energy Report-Adam Westwood 2005 The Refocus Marine Renewable Energy Report presents detailed market forecasts and analysis for the 2005-2009 period. Forecasts show Capex and capacity, and are split by component and country. Future markets for marine renewables cabling, foundations and turbines are also given. The modelling process looks at each renewable energy project on an individual basis, carefully assessing its viability and timescale in light of market forces such as governmental policy, financing, supply and demand of contractors etc. With this methodology DWL can accurately forecast when future expenditure and installations will occur. Included in this report \* A development history of each sector of the marine energy market \* The market drivers of the marine renewables industry are fully explained, from government renewables targets, through future energy supply, to climate change \* The technologies of each sector are discussed, profiled, and forecasts given for their future market \* Analyses of the issues impacting on the marine energy industry including supply and demand of installation vessels, the supply of steel, project financing, planning etc. \* A valuable appendix of company and project profiles plus tables of every marine renewable energy project worldwide, showing key details These forecasts are unique in their level of detail and accuracy. DWL manage the World Offshore Wind Database, and World Wave & Tidal Database, extensive project databases with up to 60 fields of data on each wind, wave and tidal project in operation and planning worldwide. These data sources have been in place for four years and are constantly updated giving an up to date industry view. By only using this data for identified projects, the subsequent market forecasts are grounded in reality. \* Forecasts future activity in the marine renewables sectors of offshore wind, wave and tidal energy \* Written by leading energy industry analysts, Douglas-Westwood Ltd (DWL) \* The models used in forecasting use realistic costing, based on actual project costs

Renewable Energies for Your Home: Real-World Solutions for Green Conversions-Russel Gehrke 2009-09-07 Simple and Inexpensive Renewable Energy Solutions for Your Home It's not always easy being green, and sometimes it costs more than you'd expect to get an eco-friendly home improvement project up and running. Renewable Energies for Your Home gives you sustainable home energy solutions that won't drain your wallet or the power grid. Get details on generating heat with biomass fuels and other ways to use biodiesel and ethanol in your home. You'll discover how to harness affordable wind power and soak up free solar energy. Filled with step-by-step instructions and helpful photos and illustrations, this hands-on guide will help you reduce your carbon footprint and increase your cash flow at the same time! Renewable Energies for Your Home covers: Energy savings and environmental benefits Biomass fuels, including biodiesel, ethanol, used fryer oil, and wood Producing your own biodiesel without titration Assembling a biolight grill and fire starter Making bioburn-a firewood substitute Wind turbines Solar lighting, heating, water heating, and electric generation Building a solar heat collector Creating a wind/solar hybrid electric system

Build Your Own Electric Vehicle-Seth Leitman 2008-07-31 Go Green-Go Electric! Faster, Cheaper, More Reliable While Saving Energy and the Environment “Empowering people with the tools to convert their own vehicles provides an immediate path away from petroleum dependence and should be part of the solutions portfolio.” - Chelsea Sexton, Co-founder, Plug In America and featured in Who Killed the Electric Car? “Create a superior driving experience, strengthen America, and restore the planet’s ecosystems...that’s the promise of this book and it’s well worth a read!” - Josh Dorfman, Founder & CEO - Vivavi, Modern Green Furniture Store; Author, The Lazy Environmentalist: Your Guide to Easy, Stylish, Green Living. This new, updated edition of Build Your Own Electric Vehicle contains everything that made the first edition so popular while adding all the technological advances and new parts that are readily available on the market today. Build Your Own Electric Vehicle gets on the expressway to a green, ecologically sound, cost-effective way that even can look cool, too! This comprehensive how-to goes through the process of transforming an internal combustion engine vehicle to electric or even building an EV from scratch for as much or even cheaper than purchasing a traditional car. The book describes each component in detail--motor, battery, controller, charger, and chassis---and provides step-by-step instructions on how to put them all together. Build Your Own Electric Vehicle, Second Edition, covers: EV vs. Combustible Engine Overview Environmental and Energy Savings EV Evolution since the First Electric Car Current Purchase and Conversion Costs Chassis and Design Today's Best Motors Battery Discharging/Charging Styles Electrical Systems Licensing and Insurance Issues Driving Maintenance Related Clubs and Associations Additional Resources Mergent Company Archives Manual- 2007 Contains the final statistical record of companies which merged, were acquired, went bankrupt or otherwise disappeared as private companies.

Advanced Concepts for Renewable Energy Supply of Data Centres-Jaume Salom 2017-06-12 The rapid increase of cloud computing, high performance computing (HPC) and the vast growth in Internet and Social Media use have aroused the interest in energy consumption and the carbon footprint of Data Centres. Data Centres primarily contain electronic equipment used for data processing (servers), data storage (storage equipment), and communications (network equipment). Collectively, this equipment processes, stores, and transmits digital information and is known as information technology (IT) equipment. Advanced Concepts for Renewable Energy Supply of Data Centres introduces a number of technical solutions for the supply of power and cooling energy into Data Centres with enhanced utilisation of renewable energy sources in order to achieve low energy Data Centres. Because of the high energy density nature of these unique infrastructures, it is essential to implement energy efficiency measures and reduce consumption before introducing any renewable energy source. A holistic approach is used with the objective of integrating many technical solutions such as management of the IT (Information Technology) load, efficient electrical supply to the IT systems, Low-Ex air-conditioning systems, interaction with district heating and cooling networks, re-use of heat, free cooling (air, seawater, groundwater), optimal use of heat and cold storage, electrical storage and integration in smart grids. This book is therefore a catalogue of advanced technical concepts that could be integrated into Data Centres portfolio in order to increase the overall efficiency and the share of renewable energies in power and cooling supply. Based on dynamic energy models implemented in TRNSYS some concepts are deeply evaluated through yearly simulations. The results of the simulation are illustrated with Sankey charts, where the energy flows per year within the subsystems of each concept for a selected scenario are shown, and graphs showing the results of parametric analysis. A set of environmental metrics (as the non-renewable primary energy) and financial metrics (CAPEX and OPEX) as well of energy efficiency metrics like the well-known PUE, are described and used to evaluate the different technical concepts.

Drawdown-Paul Hawken 2017-04-18 • New York Times bestseller • The 100 most substantive solutions to reverse global warming, based on meticulous research by leading scientists and policymakers around the world “At this point in time, the Drawdown book is exactly what is needed; a credible, conservative solution-by-solution narrative that we can do it. Reading it is an effective inoculation against the widespread perception of doom that humanity cannot and will not solve the climate crisis. Reported by-effects include increased determination and a sense of grounded hope.” —Per Espen Stoknes, Author, What We Think About When We Try Not To Think About Global Warming “There’s been no real way for ordinary people to get an understanding of what they can do and what impact it can have. There remains no single, comprehensive, reliable compendium of carbon-reduction solutions across sectors. At least until now. . . . The public is hungry for this kind of practical wisdom.” —David Roberts, Vox “This is the ideal environmental sciences textbook—only it is too interesting and inspiring to be called a textbook.” —Peter Kareiva, Director of the Institute of the Environment and Sustainability, UCLA In the face of widespread fear and apathy, an international coalition of researchers, professionals, and scientists have come together to offer a set of realistic and bold solutions to climate change. One hundred techniques and practices are described here—some are well known; some you may have never heard of. They range from clean energy to educating girls in lower-income countries to land use practices that pull carbon out of the air. The solutions exist, are economically viable, and communities throughout the world are currently enacting them with skill and determination. If deployed collectively on a global scale over the next thirty years, they represent a credible path forward, not just to slow the earth’s warming but to reach drawdown, that point in time when greenhouse gases in the atmosphere peak and begin to decline. These measures promise cascading benefits to human health, security, prosperity, and well-being—giving us every reason to see this planetary crisis as an opportunity to create a just and livable world.

Pivot-Remy Arteaga 2013-09-24 A proven approach to achieving entrepreneurial success in new corporate ventures and startups Every day, business and corporate startups take action based on assumptions. Yet these assumptions are based largely on guesswork that leads to everything from costly mistakes to the failure of ventures.

Fortunately, there are ways to overcome these issues and excel in your business endeavors—and this book will show you how. Engaging and informative, Pivot provides entrepreneurs with practical guidance for achieving success in corporate ventures as well as new startups. Based on more than fifteen years of academic research and many more years of experience in business and corporate startups, this book skillfully addresses topics ranging from resources and organizational uncertainties to the scope and scale of new business opportunities. Reveals how to successfully conceptualize new business opportunities, pivot as required to experiment with these opportunities, and accelerate to the marketplace Captures the capabilities needed to quickly build a business by understanding and systematically reducing uncertainties from market landscape and technology to talent and organizational positioning The digital component of this book includes a world-class strategic innovation methodology that is in demand from corporations worldwide Written with today's serious entrepreneur in mind, Pivot will provide you with the tools you'll need to get ahead of the competition and achieve consistent success.

The Great Transition: Shifting from Fossil Fuels to Solar and Wind Energy-Lester R. Brown 2015-04-20 The great energy transition from fossil fuels to renewable sources of energy is under way. As oil insecurity deepens, the extraction risks of fossil fuels rise, and concerns about climate instability cast a shadow over the future of coal, a new world energy economy is emerging. The old economy, fueled by oil, natural gas, and coal is being replaced with one powered by wind, solar, and geothermal energy. The Great Transition details the accelerating pace of this global energy revolution. As many countries become less enamored with coal and nuclear power, they are embracing an array of clean, renewable energies. Whereas solar energy projects were once small-scale, largely designed for residential use, energy investors are now building utility-scale solar projects. Strides are being made: some of the huge wind farm complexes under construction in China will each produce as much electricity as several nuclear power plants, and an electrified transport system supplemented by the use of bicycles could reshape the way we think about mobility.
