Origins of Human Communication-Michael Tomasello 2010-08-13 A leading expert on evolution and communication presents an empirically based theory of the evolutionary origins of human communication that challenges the dominant Chomskian view. Human communication is grounded in fundamentally cooperative, even shared, intentions. In this original and provocative account of the evolutionary origins of human communication, Michael Tomasello connects the

fundamentally cooperative structure of human communication (initially discovered by Paul Grice) to the especially cooperative structure of human (as opposed to other primate) social interaction. Tomasello argues that human cooperative communication rests on a psychological infrastructure of shared intentionality (joint attention, common ground), evolved originally for collaboration and culture more generally. The basic motives of the infrastructure are helping and sharing: humans communicate to request help, inform others of things helpfully, and share attitudes as a way of bonding within the cultural group. These cooperative motives each created different functional pressures for conventionalizing grammatical constructions. Requesting help in the immediate you-and-me and here-and-now, for example, required very little grammar, but informing and sharing required increasingly complex grammatical devices. Drawing on empirical research into gestural and vocal communication by great apes and human infants (much of it conducted by his own research team), Tomasello argues further that humans' cooperative communication emerged first in the natural gestures of pointing and pantomiming. Conventional communication, first gestural and then vocal, evolved only after humans already possessed these natural gestures and their shared intentionality infrastructure along with skills of cultural learning for creating and passing along jointly understood communicative conventions. Challenging the Chomskian view that linguistic knowledge is innate, Tomasello proposes instead that the most fundamental aspects of uniquely human communication are biological adaptations for cooperative social interaction in general and that the purely linguistic dimensions of human communication are cultural conventions and constructions created by and passed along within particular cultural groups.

Communication in Humans and Other Animals-Gisela Håkansson 2013-06-27 Communication is a basic behaviour, found across animal species. Human language is often thought of as a unique system, which separates humans from other animals. This textbook serves as a guide to different types of communication, and suggests that each is unique in its own way: human verbal and nonverbal communication, communication in nonhuman primates, in dogs and in birds. Research questions and findings from different perspectives are summarized and integrated to show students similarities and differences in the rich diversity of communicative behaviours. A core topic is how young individuals proceed from not being able to communicate to reaching a state of competent communicators, and the role of adults in this developmental process. Evolutionary aspects are also taken into consideration, and ideas about the evolution of human language are examined. The cross-disciplinary nature of the book makes it useful for courses in linguistics, biology, sociology and psychology, but it is also valuable reading for anyone interested in understanding communicative behaviour.

Returning to Interpersonal Dialogue and Understanding Human Communication in the Digital Age-Brown Sr., Michael A. 2018-07-20 Digital collaboration is abundant in today's world, but it is often problematic and does not provide an apt solution to the human need for comprehensive communication. Returning to Interpersonal Dialogue and Understanding Human Communication in the Digital Age is a collection of innovative studies on the methods and applications of comparing online human interactions to face-to-face interactions. Theories of Human Communication-Stephen W. Littlejohn 2010-11-04 For almost four decades, Theories of Human Communication has offered readers an engaging and informative guide to the rich array of theories that influence our understanding of communication. The first edition broke new ground with its comprehensive discussion of theorizing by communication scholars. Since that time, the field has expanded tremendously from a small cluster of explanations and relatively unconnected theories to a huge body of work from numerous traditions or communities of scholarship. The tenth edition covers both classic and recent theories created by communication scholars and informed by scholars in other fields. Littlejohn and Foss organize communication theory around two intersecting elements—contexts and theoretical traditions—and emphasize the connections, trajectories, and relationships among the theories. They provide clear, accessible explanations that synthesize without oversimplifying. Their extensive use of examples presents theorizing as a natural process and invites readers to reflect on their own experiences and to become active participants in continuing the conversation. In addition to the authors' lucid explanations of theories, the text includes From the Source boxes in which the theorists share their perspectives on communication. The extensive bibliography (almost 1,200 entries) and

chapter citations are invaluable resources for more in-depth study.

Communicating-Ruth Finnegan 2014-01-10 Many accounts of human communication suggest that we are limited to communicating through words, visual images, the mass media and by digital means. This perspective underestimates the multisensory qualities of much of our human interconnecting and the multiple sounds, touches, sights and material objects which humans use so creatively to interconnect both nearby and across space and time. Ruth Finnegan brings together research from linguistic and sensory anthropology, alternative approaches to 'material culture' and 'the body', non-verbal communication, cultural studies, computer-mediated communication, and illuminating work on animal communication. Examples from both western and non-western cultures together with plentiful illustrations enrich and deepen the analysis. The book uncovers the amazing array of sounds, sights, smells, gestures, looks, movements, touches and material objects which humans use so creatively to interconnect both nearby and across space and time - resources consistently underestimated in those western ideologies that prioritise 'rationality' and referential language. Focussing on embodied and material processes, and on practice rather than text, this comparative analysis challenges the underlying cognitive and word-centred model common to many approaches to communication. The second edition of Communicating includes a new introduction, updates to take account of recent work, an additional chapter covering ethereal non-verbal non-bodily communicating such as telepathy and dreams, fresh illustrations, a new conclusion and updated bibliography. This authoritative but accessible book is an essential transdisciplinary overview for researchers and advanced students in language and communication, anthropology and cultural studies.
