Testing Times-Willis Richard 2014-02-07 This book focuses on the delivery of public examinations offered by the main examining boards in England since Victorian England. The investigation reveals that the provision of examinations was as controversial in the nineteenth century as it is today, particularly since the government is now determined to bring in reform. The study analyses archival material from a wide range of sources, including those records stored at the National Archives and the London Metropolitan Archives. An emphasis is placed upon the various institutions that contributed to the process, including the Royal Society of Arts, the London Chamber of Commerce, the City of Guilds of London Institute and the University of London. Attention is given to the findings of the Taunton Commission and the Bryce Commission and shorter reports such as the Northcote-Trevelyn Report which served to radicalise entry and recruitment to the Civil Service. The modern GCSE and the plans for I-levels are considered and key observations are made about the efficacy of those examinations offered by Oxford and Cambridge universities and O-levels, A-levels and NVQs, The reader is given every opportunity to benefit enthusiastically in this account of examinations, and those engaged in education, whether teachers, examiners, students or administrators, will be able to gain useful insights into the workings of the examination system.

Advanced Problems in Mathematics-Stephen Siklos 2020-10-09 This new and expanded edition is intended to help candidates prepare for entrance examinations in mathematics and scientific subjects, including STEP (Sixth Term Examination Paper). STEP is an examination used by Cambridge Colleges for conditional offers in mathematics. They are also used by some other UK universities and many mathematics departments recommend that their applicants practice on the past papers even if they do not take the examination. Advanced Problems in Mathematics bridges the gap between school and university mathematics, and prepares students for an undergraduate mathematics course. The questions analysed in this book are all based on past STEP questions and each question is followed by a comment and a full solution. The comments direct the reader's attention to key points and put the question in its true mathematical context. The solutions point students to the methodology required to address advanced mathematical problems critically and independently. This book is a must read for any student wishing to apply to scientific subjects at university level and for anyone interested in advanced mathematics.
