Emerging Viral Diseases-Institute of Medicine 2015-03-19 In the past half century, deadly disease outbreaks caused by novel viruses of animal origin - Nipah virus in Malaysia, Hendra virus in Australia, Hantavirus in the United States, Ebola virus in Africa, along with HIV (human immunodeficiency virus), several influenza subtypes, and the SARS (sudden acute respiratory syndrome) and MERS (Middle East respiratory syndrome) coronaviruses - have underscored the urgency of understanding factors influencing viral disease emergence and spread. Emerging Viral Diseases is the summary of a public workshop hosted in March 2014 to examine factors driving the appearance, establishment, and spread of emerging, re-emerging and novel viral diseases; the global health and

economic impacts of recently emerging and novel viral diseases in humans; and the scientific and policy approaches to improving domestic and international capacity to detect and respond to global outbreaks of infectious disease. Special Educational Needs and Inclusive Practices-Fabio Dovigo 2017-01-28 "Today, school is becoming a rapidly changing learning environment. Thinking about students as a homogeneous population is no longer allowed, as diversity - in terms of culture, language, gender, family organisation, learning styles and so on - has emerged as a key challenge for education today. The debate on Special Educational Needs largely reflects this challenge, as working in school implies careful reconsideration of what we mean by "normal" and "special". Current educational intervention is generally based on a deficit and "within-child" model of facing SEN, whereas very little attention is given to the role of learning environments. The focus is on the child more than on the whole class, and on cognition and technical provisions more than on affective, sociocultural and community dimensions of learning. Conversely, regarding students and their needs as "hidden voices" allows us to adopt a transformative approach which sees diversity as a stimulus for the development of educational practices that might benefit all children and help school to become an inclusive and "moving" organisation. The aim of the book is twofold: on the one hand, it offers a systematic overview of the inclusive education state-of-the-art in six countries (Germany, Italy, Norway, Sweden, UK, and USA) based on the contributions by well-known scholars such as Christy Ashby, Barbara Brokamp, Fabio Dovigo, Kari Nes, Mara Westling Allodi, Tony Booth, and Beth Ferri; on the other hand, the book analyses five cases of good practices of inclusion related to different subjects and school levels."

The Welfare of Horses-N. Waran 2007-06-19 This book is the first in a series on the Welfare of Animals, and it is appropriate that it addresses horses, whose welfare in modern management systems are a subject of major concern. Keeping horses is increasingly popular in the Western world and is of major importance in many developing countries. However, the conditions in which horses are kept are very different from the environment of wild horses, which leads to many adverse effects on their welfare and behaviour. This book describes the development of horse behaviour, and the way in which the management of horses today affects their welfare. Horses for sport, companionship and work are considered and ways of improving their welfare by better training and management is described. The authors include internationally-recognised scientists from Britain, Ireland, USA and Australia. The book will be of interest to all involved in the equine industry, animal welfare, academics, students and practical horsemen.

The book is unique in its comprehensive survey of zoological diversity and its emphasis on evolutionary, systematic and ecological principles, all in one package.

Animal Diversity-Cleveland P. Hickman (Jr.) 2021 "Animal Diversity is tailored for the restrictive requirements of a one-semester or one-quarter course in

have uses in pollution studies and environmental processes among others. The second section "Social Aspects of Fisheries" considers aspects of molluscs gathering in tropical regions. The third section "Ecology" presents the results of long-term research concerning the study of variability of the size/mass relationships in the mollusc *Rapana venosa* from the northwestern part of the Black Sea and near the eastern coast of Crimea (Sudak Gulf). The fourth section "Immune System" sheds light on the elements of the molluscan immune system and survival differences against *Vibrio vulnificus* and *Vibrio parahaemolyticus*. Dynamics of Human Reproduction-James W. Wood 2017-09-29 Awarded the W. W. Howells Award for the Outstanding Book in Biological Anthropology, this volume presents a comprehensive, integrated, and up-to-date overview of the major physiological and behavioral factors affecting human reproduction. In attempting to identify the most important causes of variation in fertility within and among human populations, Wood summarizes data from a wide range of societies. Trained as an anthropologist as well as a demographer, he devotes special attention to so-called "natural fertility" populations, in which modern contraceptives and induced abortion are not used to limit reproductive output. Such an emphasis enables him to study the interaction of biology and behavior with particular clarity. The volume weaves together the physiological, demographic, and biometric approaches to human fertility in a way that will encourage future interdisciplinary research. Instead of offering a general overview, the focus is to answer one question: Why does fertility and the number of live births vary from couple to couple within any particular population, and from population to population across the human species as a whole? Topics covered include ovarian function, conception and pregnancy, intrauterine mortality, reproductive maturation and senescence, coital frequency and the waiting time to conception, marriage patterns and the initiation of reproduction, the fertility-reducing effects of breastfeeding, the impact of maternal nutrition on reproduction, and reproductive seasonality. This unique combination of comprehensive subject matter and an integrated analytical approach makes the book ideally suited both as a graduate-level textbook and as a reference work.
