Solar Labyrinth-Robert Borski 2004-05-20 Gene Wolfe's BOOK OF THE NEW SUN has been hailed by both critics and readers as quite possibly the best science fiction novel ever written. And yet at the same time, like another masterpiece of fiction, James Joyce's Ulysses, it's been deemed endlessly complex and filled with impenetrable mysteries. Now, however, in the first book-length investigation of Wolfe's literary puzzlebox, Robert Borski takes you inside the twisting corridors of the tetralogy and along the way reveals his solutions to many of the novel's conundrums and riddles, such as who really is Severian's lost twin sister (almost certainly not who you think) and why he believes the novel's main character may not even be the torturer Severian. Furthermore, and in essay after essay, Borski demonstrates how a single master key will unlock many of the book's secret relationships-all in the attempt to guide you through the labyrinth that is Gene Wolfe's BOOK OF THE NEW SUN.

Embracing Defeat: Japan in the Wake of World War II-John W. Dower 2000-06-17 Winner of the Pulitzer Prize, the 1999 National Book Award for Nonfiction, finalist for the Lionel Gelber Prize and the Kiriya Pacific Rim Book Prize, Embracing Defeat is John W. Dower's brilliant examination of Japan in the immediate, shattering aftermath of World War II. Drawing on a vast range of Japanese sources and illustrated with dozens of astonishing documentary photographs, Embracing Defeat is the fullest and most important history of the more than six years of American occupation, which affected every level of Japanese society, often in ways neither side could anticipate. Dower, whom Stephen E. Ambrose has called "America's foremost historian of the Second World War in the Pacific," gives us the rich and turbulent interplay between West and East, the victor and the vanquished, in a way never before attempted, from top-level manipulations concerning the fate of Emperor Hirohito to the hopes and fears of men and women in every walk of life. Already regarded as the benchmark in its field, Embracing Defeat is a work of colossal scholarship and history of the very first order. John W. Dower is the Elting E. Morison Professor of History at the Massachusetts Institute of Technology. He is a winner of the National Book Critics Circle Award for War Without Mercy.

Decompression-Juli Zeh 2014-05-20 A psychological thriller in the tradition of Patricia Highsmith about two couples caught in a web of conflicting passions while deep-sea diving off the beautiful Canary Islands In the late 1990s, Sven Fiedler and his girlfriend, Antje, left Germany for the island of Lanzarote, rejecting what Sven considered a vulgar culture of materialism and judgment. The young couple set up a diving service catering to tourists eager to bask in the warm sunshine and explore the silent, gleaming marine paradise that makes this otherwise barren volcanic island such a remarkable retreat. Sven's approach was simple: take the mechanics of diving seriously, instruct his clients clearly, and stay out of their personal business as best he can. And life on the island goes smoothly until two German tourists--Jola von der Pahlen, a daytime soap star on the verge of cinematic success, and Theo Hast, a stalled novelist--engage Sven for a high-priced, intensive two-week diving experience. Staying in a guest house on Sven and Antje's property, the two visitors and their hosts quickly become embroiled in a tangle of jealousy and suspicion. Sven is struck by Jola's beauty, her evident wealth, and her apparently volatile relationship with the much older Theo. Theo quickly leaps to the conclusion that Sven and Jola are having an affair, but, oddly, he seems to facilitate it rather than trying to intervene. Antje, looking on, grows increasingly wary of these particular clients. As the point of view shifts from one character to the next, the reader is constantly kept guessing about who knows what, and, more important, who is telling the truth. A brutal game of delusion, temptation, and manipulation plays out, pointing toward a violent end. But a quiet one, down in the underwater world beneath the waves.

The Taming of the Duke-Eloisa James 2009-10-13 Imogen, Lady Maitland, has decided to dance on the wild side. After all, she's in the delicious position of being able to take a lover. A discreet male who knows just when to leave in the morning. But Lady Maitland is still under the watchful eye of her former guardian, the wildly untamed Rafe, the Duke of Holbrook. He believes she is still in need of a "watchdog." She laughs at the idea that someone so insufferably lazy and devoted to drink can demand that she behave with propriety. It's Rafe's long-lost brother, a man who looks precisely like the duke but with none of his degenerate edge, who interests Imogen. To Imogen, he's the shadow duke . . . the man who really should hold the title. But when Imogen agrees to accompany Gabe to a masquerade...whose masked eyes watch her with that intense look of desire? Who exactly is she dancing with? The duke or the shadow duke? Rafe . . . or Gabe?

Vehicle Dynamics of Modern Passenger Cars-Peter Lugner 2018-05-22 The book provides the essential features necessary to understand and apply the mathematical-mechanical characteristics and tools for vehicle dynamics including control mechanism. An introduction to passenger car modeling of different complexities provides the basics for the dynamical behavior and presents vehicle models later used for the application of control strategies. The presented modeling of the tire behavior, also for transient changes of the contact patch properties, shows the necessary mathematical descriptions used for the simulation of the vehicle dynamics. The introduction to control for cars and its extension to complex applications using e.g. observers and state estimators is a main part of the book. Finally the formulation of proper multibody codes for the simulation leads to the integration of all parts. Examples of simulations and corresponding test verifications show the profit of such a theoretical support for the investigation of the dynamics of passenger cars.

Beyond Engineering-Robert Pool 1997-07-17 We have long recognized technology as a driving force behind much historical and cultural change. The invention of the printing press initiated the Reformation. The development of the compass ushered in the Age of Exploration and the discovery of the New World. The cotton gin created the conditions that led to the Civil War. Now, in Beyond Engineering, science writer Robert Pool turns the question around to examine how society shapes technology. Drawing on such disparate fields as history, economics, risk analysis, management science, sociology, and psychology, Pool illuminates the complex, often fascinating interplay between machines and society, in a book that will revolutionize how we think about technology. We tend to think that reason guides technological development, that engineering expertise alone determines the final form an invention takes. But if you look closely enough at the history of any invention, says Pool, you will find that factors unrelated to engineering seem to have an almost equal impact. In his wide-ranging volume, he traces developments in nuclear energy, automobiles, light bulbs, commercial electricity, and personal computers, to reveal that the ultimate shape of a technology often has as much to do with outside and unforeseen forces. For instance, Pool explores the reasons why steam-powered cars lost out to internal combustion engines. He shows that the Stanley Steamer was in many ways superior to the Model T--it set a land speed record in 1906 of more than 127 miles per hour, it had no transmission (and no transmission headaches), and it was simpler (one Stanley engine had only twenty-two moving parts) and quieter than a gas engine--but the steamers were killed off by factors that had little or nothing to do with their engineering merits, including the Stanley twins' lack of business acumen and an outbreak of hoof-and-mouth disease. Pool illuminates other aspects of technology as well. He traces how seemingly minor decisions made early along the path of development can have profound consequences further down the road, and perhaps most important, he argues that with the increasing complexity of our technological advances--from nuclear reactors to genetic engineering--the number of things that can go wrong multiplies, making it increasingly difficult to engineer risk out of the equation. Citing such catastrophes as Bhopal, Three Mile Island, the Exxon Valdez, the Challenger, and Chernobyl, he argues that it is time to rethink our approach to technology. The days are gone when machines were solely a product of larger-than-life inventors and hard-working engineers. Increasingly, technology will be a joint effort, with its design shaped not only by engineers and executives but also psychologists, political scientists, management theorists, risk specialists, regulators and courts, and the general public. Whether discussing bovine growth hormone, molten-salt reactors, or baboon-to-human transplants, Beyond Engineering is an engaging look at modern technology and an illuminating account of how technology and the modern world shape each other.
