The section on specific interventions addresses each of the conceptual practice models according to a consistent chapter template, which enables the reader to apply conceptual practice models in real-world contexts. Willard and Spackman's Occupational Therapy-Helen S. Willard 1988

Goal Advancement Among Mental Health Self-help Agency Members-John Quinton Hodges 2001

Secrets From the Eating Lab-Traci Mann 2015-04-07 A provocative expose of the dieting industry from one of the nation's leading researchers in self-control and the psychology of weight loss that offers proven strategies for sustainable weight loss. From her office in the University of Minnesota's Health and Eating Lab, professor Traci Mann researches self-control and dieting. And what she has discovered is groundbreaking. Not only do diets not work; they often result in weight gain. Americans are losing the battle of the bulge because our bodies and brains are not hardwired to resist food—the very idea of it works against our biological imperative to survive. In Secrets From the Eating Lab, Mann challenges assumptions—including those that make up the very foundation of the weight loss industry—about how diets work and why they fail. The result of more than two decades of research, it offers cutting-edge science and exciting new insights into the American obesity epidemic and our relationship with eating and food. Secrets From the Eating Lab also gives readers the practical tools they need to actually lose weight and get healthy. Mann argues that the idea of willpower is a myth—we shouldn't waste time and money trying to combat our natural tendencies. Instead, she offers 12 simple, effective strategies that take advantage of human nature instead of fighting it—from changing the size of your plates to socializing with people with healthy habits, removing “healthy” labels that send negative messages to redefining comfort food.

Occupational Therapy Practice Guidelines for Mental Health Promotion, Prevention, and Intervention for Children and Youth-Susan Bazyk 2013 Of the estimated 70 million children in the United States, 6 million to 9 million have a serious emotional disturbance. However, only 1 in 5 of these children receives any professional help. Over the years, the view of children's mental health services has changed. This new thinking has altered how occupational therapy services are perceived and implemented. In addition to providing services to children diagnosed with a mental illness, occupational therapy professionals can help children develop and maintain mental health in school, community, and mental health settings. Using an evidence-based perspective and public health model, this Practice Guideline provides an overview of the occupational therapy process for mental health promotion, prevention, and intervention for children ages 3 to 21 years. It defines the occupational therapy domain, process, and interventions that occur within the boundaries of acceptable practice with this underserved population. Interventions include those for promotion, prevention, and intensive individualized care on topics such as social skills, health promotion, play/recreation/leisure, and cognitive-behavioral therapy.
