Motor Age- 1914

Planter and Sugar Manufacturer- 1925

From Hitler's U-Boats to Khrushchev's Spyflights-Cris Clark 2013-09-09 This book tells the tale of the illustrious Royal Air Force career of Tom Clark, a World War Two gunner and post-war signaller in action during some of the most pivotal events of the twentieth century. Lovingly penned by his son, it provides an authentic insight into this dynamic period of world history.From work as an air gunner, involved in the daunting task of taking on the might of Hitler's U-boat fleet, to post-war involvement in an Intelligence capacity during the dramatic events surrounding Khrushchev and the atomic threat of the late 1950s, Clark's career was dramatic and varied to say the least.

Having joined the RAF as an aircraft man just before the Second World War, Clark was destined to take part in a whole range of wartime operational engagements. His career featured involvement in the famous 1941 hunt for the elusive Bismarck, the dangers of life as part of an Air Sea Rescue squadron in conflicted waters, and the experience of training as a gunnery leader (later an instructor), training air gunners for the famed Desert Air Force. His career also took in a fraught period behind enemy lines, when his crew of four were shot down in enemy territory in Northern Italy. Seven weeks in a safe house in Florence are relayed in engaging and dramatic style, as are a raft of other personal and professional achievements, set within the context of the wider conflict. Here is a career that deserves to be recorded and celebrated, and there is perhaps no-one better placed than the subject's son to act as custodian to his thrilling story.

Science Policies and Twentieth-Century Dictatorships-Amparo Gómez 2016-03-03 Making a fresh contribution to the political history of science, this book explores the connections between the science policies of three countries that each experienced considerable political upheaval in the twentieth century: Spain, Italy and Argentina. By focussing on these three countries, the contributors are able to present case studies that highlight the characteristics and specificities of the democratic and dictatorial political processes involved in the production of science and technology. The focus on dictatorship presents the opportunity to expand our knowledge -beyond the more extensive literature about science in Nazi Germany and Stalinist USSR -about the level of political involvement of scientists in non-democratic contexts and to what extent they act as politicians in different contexts. Key topics covered include the new forms of organization and institutionalization of science in the twentieth century; the involvement of scientific communities in the governance of science and its institutions; the role of ideology in scientific development; the scientific practices adopted by scientific communities in different contexts; and the characteristics of science and technology produced in these contexts.
