Chemistry-Edward J. Neth 2016-06-07 "Chemistry: Atoms First is a peer-reviewed, openly licensed introductory textbook produced through a collaborative publishing partnership between OpenStax and the University of Connecticut and UConn Undergraduate Student Government Association. This title is an adaptation of the OpenStax Chemistry text and covers scope and sequence requirements of the two-semester general chemistry course. Reordered to fit an atoms first approach, this title introduces atomic and molecular structure much earlier than the traditional approach, delaying the introduction of more abstract material so students have time to acclimate to the study of chemistry. Chemistry: Atoms First also provides a basis for understanding the application of quantitative principles to the chemistry that underlies the entire course."--Open Textbook Library.

Multiple Representations in Chemical Education-John K. Gilbert 2009-02-28 Chemistry seeks to provide qualitative and quantitative explanations for the observed behaviour of elements and their compounds. Doing so involves making use of three types of representation: the macro (the empirical properties of substances); the sub-micro (the natures of the entities giving rise to those properties); and the symbolic (the number of entities involved in any changes that take place). Although understanding this triplet relationship is a key aspect of chemical education, there is considerable evidence that students find great difficulty in achieving mastery of the ideas involved. In bringing together the work of leading chemistry educators who are researching the triplet relationship at the secondary and university levels, the book discusses the learning involved, the problems that students encounter, and successful approaches to teaching. Based on the reported research, the editors argue for a coherent model for understanding the triplet relationship in chemical education.

A Story as Sharp as a Knife-Robert Bringhurst 2011-03-15 The Haida world is a misty archipelago a hundred stormy miles off the coasts of British Columbia and Alaska. For a thousand years and more before the Europeans came, a great culture flourished in these islands. The masterworks of classical Haida sculpture, now enshrined in many of the world's great museums, range from exquisite tiny amulets to magnificent huge housepoles. Classical Haida literature is every bit as various and fine. It extends from tiny jewels crafted by master songmakers to elaborate mythic cycles lasting many hours. The linguist and ethnographer John Swanton took dictation from the last great Haida-speaking storytellers, poets and historians from the fall of 1900 through the summer of 1901. His Haida hosts and colleagues had been raised in a wholly oral world where the mythic and the personal interpenetrate completely. They joined forces with their visitor, consciously creating a great treasury of Haida oral literature in written form. Poet and linguist Robert Bringhurst has worked for many years with these century-old manuscripts, which have waited until now for the broad recognition they deserve.
